Subject Index

Acid–base, 325
Activation energy, 71
Adsorption, 115, 143
Adsorption kinetics, 105
Air/liquid interface, 287
Air/solution interface, 9
Alcohols, 247
α-Alumina, 143
Ammonium poly(methacrylate) (APMA), 143
Anionic–cationic adsorption films, 9
AOT reverse micelles, 307
Atomic force microscopy, 3

Biomaterials, 267
Biporous media, 105
BSA, 71
Bulk additives, 55

Calcium hydroxyapatite, 297
Carboxylates, 63
Carboxy-terminated particles, 257
Cationic polymers, 131
Cationic surfactant solutions, 121
Cell deformability, 95
Cethyltrimethylammonium bromide, 121
Channels, 71
Charge generation, 163
Charge regulation model, 3
c.m.c, 247
Coagulation by alcohols, 217
Compartmented system, 71
Concentration, 19
Conductivity, 247, 279
Contact angles, 325
Coprecipitation, 297
Critical micelle concentration, 63, 85
Cryogel, 71

Decane/water interface, 9
Dextran-induced aggregation, 95
Diethylenetriamine, 257

Differential thermal analysis, 227
DL-Threonine, 315
Dodecyltrimethylammonium bromide, 9
Dreiding II, 163
Dynamic adsorption behavior, 287
Dynamic surface tension, 287

Electrodeposition, 85
Electrokinetics, 143
Electrostatic and chemical interaction, 143
Enthalpy of vaporisation, 163

Filaments, 71
Film-forming substance, 85
Floc size, 131
Floc strength, 131
Fluorescence polarization, 307
FRAP, 39
Free space modelling, 163
FT-PGSE NMR, 71

Heteroflocculation, 131
Hydrocarbon chain length, 47
Hydrocarbons, 267
Hydrodynamic radius, 307
Hydrogen bonding, 143

Interaction forces, 175
Interfacial properties, 19
Interfacial shear strength, 325
Interfacial tension, 63
Ion-exchange, 297
Ion exchange, 115

Kaolin, 131

LaMer diagram, 183, 205
Lateral diffusion, 39
Ligand, 257

Maghemite, 257
Magnetic particles, 257

PII: S0927-7757(99)00537-3

Membrane surface charge, 95
Micelle, 247
Microemulsion, 279
Microflocs, 131
Mixed surfactants, 287
Models of cell aggregation, 95
Modified emulsifiers, 63
Molecular packing, 71
Monoacylglycerols, 63
Monodispersed particles, 183, 205
Monolayer–bilayer surface phase transition, 55
Monolayers, 267
Morphology, 71
Multicomponent restricted self-diffusion, 71

n-alkylammonium chlorides, 47
Near-critical propane, 307
Nitrogen adsorption, 227
N,N-Dimethyl acetamide, 247
Nonionic micellar aggregates, 19
Nonionic surfactants, 27
Nucleation, 183, 205, 315

OH-groups, 175
Optical resolution, 315

Percolation, 279
3,4,9,10-perylene sodium tetracarboxylate, 307
Phase diagrams, 27
Phase transition, 47
Phosphated zirconia, 227
Phospholipids, 39
Photocyclization, 279
Photodimerization, 279
Polyelectrolyte, 85
Polyelectrolytes, 39
Pores, 71
PS latex stability, 217
Pure alcohol melts, 55
Purity decrease, 315
PVA, 71

q-Space imaging, 71
Quartz surfaces, 121

Red blood cell, 95

Scanning force microscopy, 175
Silver halide, 183, 205
Single fiber fragmentation test, 325
Size control, 183, 205
Sodium octyl sulfonate, 9
Sodium polyacrylate, 131
Solubilization, 85
Solvent, 163
Solvent-induced coagulation, 217
Styrene supported zirconium (IV) tungstophosphate, 115
Sucrose esters, 27
Surface characterization, 297
Surface freezing, 55
Surface ionization parameters, 3
Surface modification, 297
Surface morphology, 315
Surface pressure, 267
Surface tension, 247
Surface thermodynamics, 267
Surfactant inactivation, 287
Syneresis, 71

Temperature, 19
Temporal nonlocality, 105
Thermodynamics, 115
Thermogravimetry, 227

Water solubilization, 27
Wave mechanism of mass transfer, 105
W/O microemulsions, 27

X-ray diffractometry, 227
X-ray photoelectron spectroscopy, 325

Zirconia, 227
